SQL QUERIES

ASSIGNMENT- 3

NAME: SHOBIYA SENTHILKUMAR

REG.NO: 732924CSR151

Write an SQL query to display all student records from the Student table.

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

studid	name	department	marks	city
151	shobiya	cse	99	erode
161	sugi	cse	100	tirupur
171	taru	ece	90	namakal
181	vikashini	eee	97	bavani
191	sneha	mde	95	thiruchi

Write a query to display the Name and Marks of all students.

Limit to 1000 rows

```
1 • select name,marks from stud;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

name	marks
shobiya	99
sugi	100
taru	90
vikashini	97
sneha	95

Result Grid

Form Editor

Edit with WPS Office

Write a query to display students who scored more than 80 marks.

```
select *from stud where marks>80;
```

Result Grid

studid	name	department	marks	city
151	shobiya	cse	99	erode
161	sugi	cse	100	tirupur
171	taru	ece	90	namakal
181	vikashini	eee	97	bavani
191	sneha	mde	95	thiruchi

Write a query to display students belonging to the CSE department.

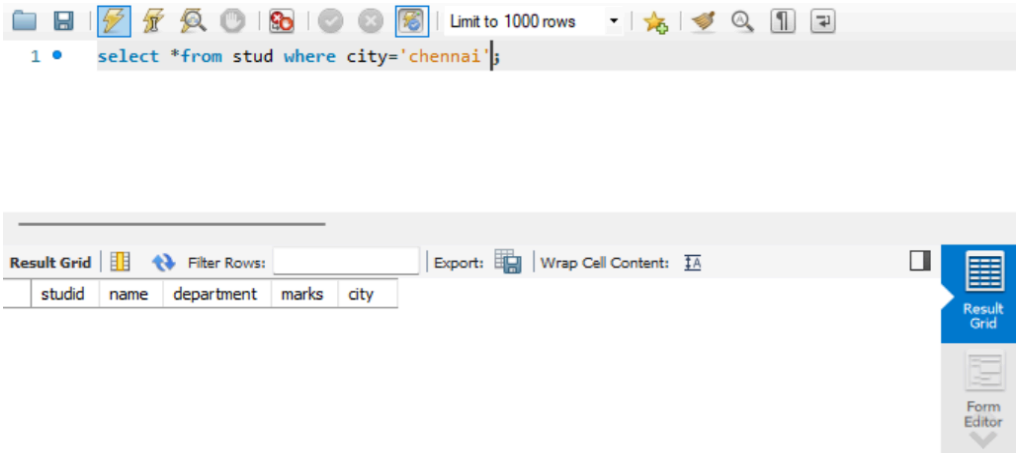
```
select *from stud where department='cse';
```

Result Grid

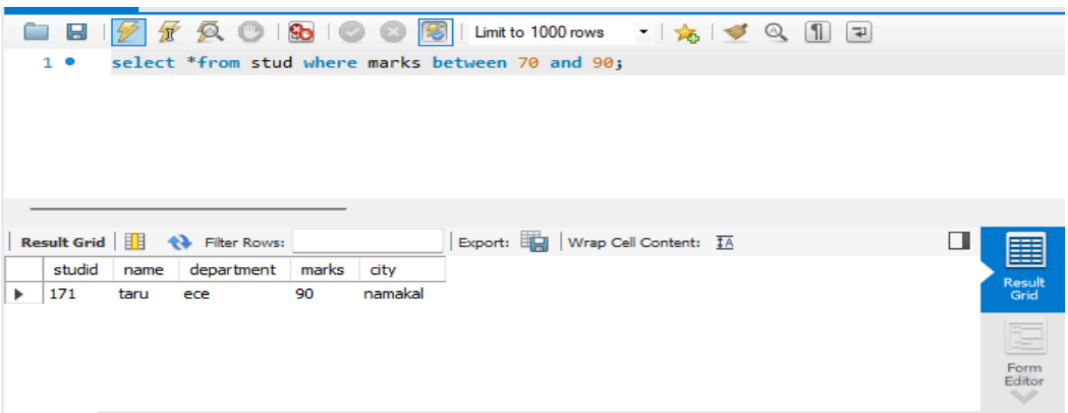
studid	name	department	marks	city
151	shobiya	cse	99	erode
161	sugi	cse	100	tirupur

Write a query to display students whose city is Chennai.

Edit with WPS Office



Write a query to display students whose marks are between 70 and 90.



Write a query to display student names that end with the letter 'a' using the LIKE operator.

Edit with WPS Office

```
select name from stud where name like '%a';
```

name
shobiya
sneha

Write a query to display distinct departments from the Student table.

```
select distinct department from stud;
```

department
cse
ece
eee
mde

Write a query to display students whose City value is NULL.

Edit with WPS Office

```
select * from stud where city is null;
```

studid	name	department	marks	city

Write a query to find the highest marks obtained by a student using an aggregate function.

```
select max(marks)as highest_marks from stud;
```

highest_marks
100

Write a query to find the average marks of students in the ECE department.

Edit with WPS Office

```
select avg(marks) as average_marks from stud where department='ece';
```

average_marks
90.0000

Write a query to count the number of students in each department using GROUP BY.

```
select department,count(*)as number_of_stud from stud group by department;
```

department	number_of_stud
cse	2
ece	1
eee	1
mde	1

Write a query to display students whose marks are greater than the average marks of all students (nested subquery).

Edit with WPS Office

```
select *from stud where marks>(select avg(marks)from stud);
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

studid	name	department	marks	city
151	shobiya	cse	99	erode
161	sugi	cse	100	tirupur
181	vikashini	eee	97	bavani

Result Grid | Form Editor

Write an SQL statement to insert a new student record into the Student table.

```
insert into stud(studId,name,department,marks,city)values(201,'sow','cse',85,'chennai');
select*from stud;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

studid	name	department	marks	city
151	shobiya	cse	99	erode
161	sugi	cse	100	tirupur
171	taru	ece	90	namakal
181	vikashini	eee	97	bavani
191	sneha	mde	95	thiruchi
201	sow	cse	85	chennai
